FLEX-4

20-0-6

- 1 Contains quinclorac rather than MCPA which provides post emergent control of early emerged annual grass weeds.
- 2 Improves window of application for control of undesirable annual grasses.
- 3 Mini sized granules improve active ingredient distribution.
- 4 Nutrient package formulated with zero phosphorus and 50% slow release nitrogen to maximize performance and minimize environmental impact.

WHAT IS QUINCLORAC?

Quinclorac (Drive XLR8, Quinclorac 75DF, others) is a postemergence herbicide for control of crabgrass, foxtail, barnyardgrass, and a number of broad-leaf weed species in established turfgrass. It controls newly emerged summer annual grasses, as well as mature plants (annual grasses with more than 4 tillers).
